PROFESSIONAL SUMMARY

AI-driven Automation & Operations Analyst with ~3 years' experience designing and shipping AI-powered automation and governance systems — from enterprise knowledge copilots and fraud-detection frameworks to AI-agent governance tooling. n8n (Level 2 Advanced) and Google AI certified, with hands-on delivery across Python/FastAPI, SQL, and multi-LLM tooling (ChatGPT, Claude, Gemini, Perplexity). Track record of owning automation initiatives end-to-end and driving measurable impact — 95% faster knowledge retrieval, 92% fraud-detection accuracy, 93% reduction in reporting effort.

CORE SKILLS

AI & Automation: n8n (Level 2 Advanced Certified), Microsoft Power Automate, AI Agent Governance & Risk Auditing, NotebookLM, Microsoft Copilot, ChatGPT, Claude, Gemini, Perplexity, Prompt Engineering, AI Workflow Design, API Integrations, LLM Applications

Analytics & Reporting: SQL, Snowflake, PostgreSQL (Supabase), Power BI, Tableau, Looker Studio (dashboards, calculated fields, blended data sources), GA4, Advanced Excel (VBA/Macros), Dashboard Development, KPI Tracking, SLA/TAT Monitoring

Operations & Process Improvement: Workflow Optimization, Process Automation, Root-Cause & Bottleneck Analysis, Regression / Test-Driven Validation, SOP Design, Cross-Functional Stakeholder Management, Documentation & Knowledge Management

Platforms & Collaboration Tools: Power Apps, Google Sheets (API-driven automation), Google Drive, Monday.com, Jira, Confluence, Microsoft Teams, Outlook

Programming: Python, FastAPI, REST APIs, R, IBM SPSS

PROFESSIONAL EXPERIENCE

Gartner (G2, post-acquisition)

Aug 2024 – May 2026

Product Reviews Associate (Operations & Analytics)

Gurugram, India

Transitioned to G2 in February 2026 following G2's acquisition of Gartner Digital Markets, retaining the same role and responsibilities.

- Owned end-to-end operational reporting and SLA monitoring for a high-volume review operations function, identifying process bottlenecks and driving automation initiatives that materially reduced manual reporting effort.
- Partnered with cross-functional stakeholders to redesign operational workflows using SQL, AI-powered automation, and standardized documentation, improving process efficiency and supporting team-wide knowledge management.
- Selected for an internal AI initiative team to identify operational and process gaps across the organization and design AI-driven automation solutions to close them; facilitated internal AI adoption workshops and upskilling sessions.
- Built and automated a SQL-driven SLA/TAT intelligence dashboard (93% reduction in daily reporting effort) and an AI-assisted documentation generator (93% reduction in per-record documentation time), plus six custom AI personas standardizing analytical workflows across the team.
- Automated repetitive reporting tasks (including report template standardization) using VBA/Macros, and managed reporting workflows using data queried from Snowflake and tracked via Monday.com.

Delvens

Jul 2023 – Feb 2024

Market Research Associate

Noida, India

- Owned end-to-end market research and competitive intelligence projects across multiple industries, translating primary and secondary research into actionable, decision-ready insights for clients.
- Applied structured analytical frameworks (Porter's Five Forces, PESTLE, SWOT, benchmarking) to support market entry and competitive-positioning engagements, identifying growth opportunities and emerging risks.

- Used SQL, R, SPSS, and Tableau to analyze complex datasets, automate recurring research workflows, and convert raw data into executive-ready reporting.
- Redesigned data collection and reporting workflows, reducing processing time by 45 minutes per cycle and reporting turnaround by 20 minutes, while improving accuracy and consistency.
- Achieved the team's highest report-closure rate, contributing to a 50% increase in individual productivity and a 40% increase in lead generation through streamlined research operations.

PROJECTS

Reviora – AI Knowledge Copilot

Gartner (G2)

Teams were losing significant time searching scattered internal knowledge sources. Owned the end-to-end design and rollout of Reviora, an AI-powered knowledge copilot built on NotebookLM that centralized organizational knowledge into a searchable assistant.

Result: 95% reduction in knowledge retrieval time, recovering 5–6 productive days per month across the team.

Hybrid Fraud & Spam Detection Framework

Gartner (G2)

Manual fraud/spam review was slow and inconsistent, creating risk of undetected operational losses. Led the end-to-end design and deployment of a hybrid detection framework combining SQL-driven rule automation with AI-assisted review logic.

Result: detection accuracy improved from 72% to 92%, preventing \$12K+ in operational losses.

AI Agent Governance Auditor

Personal Project, 2026

github.com/SomeRandomIntrovert/AI-governance-auditor

Most enterprises now run AI agents in low-code tools like n8n with little way to verify - not just claim - that risky actions are gated behind human approval. Built a Python/FastAPI auditing tool using graph-traversal verification and a fully automated n8n → FastAPI → Looker Studio scoring pipeline.

Result: audited 68 real public n8n workflows and found only 2.94% were genuinely, verifiably gated, while 55.88% ran fully autonomously with no approval gate at all.

Self-Healing SLA Anomaly & Root-Cause Triage Agent

Personal Project, 2026

github.com/SomeRandomIntrovert/sla-breach-triage-agent

SLA-breach investigation typically requires manual log review and report writing. Built an n8n-orchestrated pipeline that ingests SLA telemetry from Supabase/PostgreSQL and applies Gemini-based root-cause classification across three separately validated failure-pattern variants.

Result: executive-ready incident PDF reports generated and archived automatically, with no manual report-writing step.

The Adoption-Trust Gap

Personal Project, 2026

github.com/SomeRandomIntrovert/adoption-trust-gap

Every 2025/2026 report on AI-adoption resistance leans on behavioral-science theory like “identity threat” as narrative color, without testing it statistically. Applying an MA in Psychology, built a Python/logistic-regression pipeline on 24,988 real Stack Overflow Developer Survey responses, cross-country robustness-tested before reporting any finding.

Result: found the pattern runs backward from the obvious assumption - developers who see AI as a job threat show 35% lower odds of distrusting it, not higher – a finding that held up under formal interaction testing across the US and India.

CERTIFICATIONS

- Google AI Professional Certificate — Google, May 2026
- n8n Level 2: Advanced Course — n8n, May 2026
- Google Data Analytics Professional Certificate — Google, April 2024
- Microsoft AI Product Management Course — Microsoft, In Progress

EDUCATION

Master of Arts (MA), Psychology <i>Amity University, Noida, India</i>	May 2022
Bachelor of Science (BS), Honors, Microbiology <i>Amity University, Noida, India</i>	May 2020

ACHIEVEMENTS & PUBLICATIONS

- Awarded Top Performer recognition within the team at Gartner for outstanding contributions to operational efficiency and analytical excellence.
- Publication: “Emotional Competence and Altruism among Young Adults in India” — International Journal of Recent Advances in Multidisciplinary Topics, November 2022 (empirical behavioral research using quantitative methods).
