Bhargava Bhavaraju

Trust & Safety | Fraud & Risk Operations Analyst

Delhi, India • bhargava.bhavaraju@gmail.com • +91 9910569333

LinkedIn • Portfolio • Github

PROFESSIONAL SUMMARY

Trust & Safety and Fraud Risk Operations Analyst with 2.5 years' experience in fraud and spam detection, content policy compliance, and SLA risk monitoring. Designed a hybrid fraud and spam detection framework (SQL rule automation plus AI-assisted review logic) that raised detection accuracy from 72% to 92% and prevented $12K+ in operational losses. Built an AI agent governance auditor that verifies whether automated actions are gated behind human approval, and an automated root-cause triage pipeline for SLA breaches. Hands-on with SQL, Python, REST APIs, n8n (Level 2 Advanced Certified), Microsoft Power Automate, and Power BI. MA in Psychology with published behavioral research, applied to understanding user behavior and abuse patterns.

CORE SKILLS

Trust, Safety & Risk: Fraud & Spam Detection, Anomaly Detection, Content Policy Compliance, Risk Identification & Mitigation, AI Agent Governance & Risk Auditing, Human-in-the-Loop Approval Gating, Root-Cause & Bottleneck Analysis, SLA/TAT Monitoring, Regression / Test-Driven Validation

Automation & AI: n8n (Level 2 Advanced Certified), Microsoft Power Automate, REST APIs, API Integrations, VBA/Macros, AI Workflow Design, Prompt Engineering, LLM Applications, Microsoft Copilot, NotebookLM

Data & Analytics: SQL, Snowflake, PostgreSQL (Supabase), Python and FastAPI (personal projects), Power BI, Tableau, Looker Studio, Advanced Excel, KPI Tracking, Dashboard Development, R, IBM SPSS

Research & Collaboration: Behavioral Analysis, Quantitative Research (Logistic Regression), Cross-Functional Stakeholder Management, SOP Design, Documentation, Jira, Confluence, Monday.com, SharePoint Online

PROJECTS

Hybrid Fraud & Spam Detection Framework | Gartner (G2)

Manual fraud and spam review was slow and inconsistent, creating risk of undetected operational losses. Designed and deployed a hybrid detection framework combining SQL-driven rule automation with AI-assisted review logic, automatically categorizing records by pattern type (spam, fraud, information discrepancy) into a pre-triaged review queue.

Result: detection accuracy improved from 72% to 92%, preventing $12K+ in operational losses, with 75%+ efficiency gain and manual detection effort eliminated as the primary review mechanism.

AI Agent Governance Auditor | Personal Project, 2026

github.com/SomeRandomIntrovert/AI-governance-auditor

Most enterprises now run AI agents in low-code tools like n8n with little way to verify that risky actions are gated behind human approval. Built a Python/FastAPI auditing tool that scores workflows on approval gating, error handling, audit trail, and credential exposure using forward-reachability graph verification, run as an automated n8n → FastAPI → Google Sheets → Looker Studio pipeline.

Result: audited 68 real public n8n workflows: only 2.94% were verifiably gated behind human approval, 55.88% ran fully autonomously with no approval gate, and 0% had structured error handling.

Self-Healing SLA Anomaly & Root-Cause Triage Agent | Personal Project, 2026

github.com/SomeRandomIntrovert/sla-breach-triage-agent

SLA-breach investigation typically requires manual log review and report writing. Built an n8n-orchestrated pipeline that ingests SLA telemetry from Supabase/PostgreSQL and applies Gemini-based root-cause classification, validated separately against infrastructure, capacity/staffing, and third-party outage failure patterns.

Result: executive-ready incident PDF reports generated and archived automatically, with no manual report-writing step.

The Adoption-Trust Gap | Personal Project, 2026

github.com/SomeRandomIntrovert/adoption-trust-gap

Applying an MA in Psychology, tested behavioral-science theory statistically on 24,988 real Stack Overflow Developer Survey responses using a Python logistic-regression pipeline, with cross-country robustness testing before reporting any finding.

Result: developers who see AI as a job threat showed 35% lower odds of distrusting it, a finding that held under formal interaction testing across the US and India.

Reviora: AI Knowledge Copilot | Gartner (G2)
Measured ~44 hours per month lost to fragmented documentation and repeated process queries, then built Reviora, a scalable AI knowledge copilot on NotebookLM that centralized process knowledge into a searchable assistant.
Result: 95% reduction in knowledge retrieval time, recovering 5–6 productive days per month.

PROFESSIONAL EXPERIENCE

Gartner (G2, Post-Acquisition) **Gurugram, India**
Product Reviews Associate (Operations & Analytics) **Aug 2024 – May 2026**
Transitioned to G2 in February 2026 following G2's acquisition of Gartner Digital Markets, retaining the same role and responsibilities.

- Owned review quality and policy compliance for a high-volume review operation: identified risk and fraud anomalies against content policies, managed policy updates as spam and fraud patterns evolved, and worked closely with the compliance team.
- Owned end-to-end operational reporting and SLA monitoring, identifying process bottlenecks and driving automation initiatives that materially reduced manual reporting effort.
- Built and automated a SQL-driven SLA/TAT intelligence dashboard that surfaced breaching records for priority processing and tracked team efficiency (93% reduction in daily reporting effort).
- Built an AI-assisted documentation generator (93% reduction in per-record documentation time) and six custom AI personas standardizing analytical workflows, including an irregularities-identification persona that flags word-count anomalies, harsh content, and Conflict of Interest patterns.
- Automated recurring operational tasks using Microsoft Power Automate and VBA/Macros, with data queried from Snowflake and tracked via Monday.com; partnered with cross-functional stakeholders to redesign workflows and standardize documentation.
- Presented Power BI dashboards and PowerPoint decks on business performance to SLT and ELT; selected for an internal AI initiative team to identify process gaps and design automation solutions, and led AI and technical L&D sessions at team and BU level.

Delvens **Noida, India**
Market Research Associate **Jul 2023 – Feb 2024**

- Redesigned data collection and reporting workflows at an early-stage startup, reducing processing time by 45 minutes per cycle and reporting turnaround by 20 minutes while improving accuracy and consistency.
- Used SQL, R, SPSS, and Tableau to analyze complex datasets, automate recurring research workflows, and convert raw data into executive-ready reporting.
- Owned end-to-end market research and competitive intelligence projects using Porter's Five Forces, PESTLE, SWOT, and benchmarking; achieved the team's highest report-closure rate, contributing to a 50% increase in individual productivity and a 40% increase in lead generation.

CERTIFICATIONS

- n8n Level 2: Advanced Course – n8n, May 2026
- Google AI Professional Certificate – Google, May 2026
- Google Data Analytics Professional Certificate – Google, April 2024

EDUCATION

Amity University **Noida, India**
Master of Arts (MA), Psychology May 2022
Amity University **Noida, India**
Bachelor of Science (BS), Honors May 2020

ACHIEVEMENTS & PUBLICATIONS

- Awarded Top Performer recognition within the team at Gartner for outstanding contributions to operational efficiency and analytical excellence.
- Publication: "Emotional Competence and Altruism among Young Adults in India", International Journal of Recent Advances in Multidisciplinary Topics, November 2022 (empirical behavioral research using quantitative methods).
